

Your Pass to... Pole Signage.

These wayfinding signs would be affixed to existing light fixtures and poles and would be constructed so that the destination slats could be slid in the larger sign. The directional arrows would also be modular in nature so that they could be placed in the appropriate location.

Free Arrows Signage.

3

This signage option would be a low-cost option but it still would be an effective and flexible one. All of the double sided signs would be affixed existing light fixtures and/or poles and could be positioned in any configuration around the pole.

wayfinding- walking signs.

Here is a concept for the walking signs using a few of the examples provided. They are currently designed at 12" wide x 8" tall, but can be adjusted to what works best for the area. A hashtag, #walkratorn, was created and included so those who see the signs and/or find them helpful can let others know via social media.
